Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-7 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claims are drawn to methods which manipulate data, and do not provide a concrete tangible and useful result. The result of the method of claim 1 is a "coupling" which must be further manipulated and worked upon to be useful to a user. MPEP 2106: "For such subject matter to be statutory, the claimed process must be limited to a practical application of the abstract idea or mathematical algorithm in the technological arts. See *Alappat*, 33 F.3d at 1543, 31 USPQ2d at 1556-57 (quoting *Diamond v. Diehr*, 450 U.S. at 192, 209 USPQ at 10). See also *Alappat* 33 F.3d at 1569, 31 USPQ2d at 1578-79 (Newman, J., concurring) ("unpatentability of the principle does not defeat patentability of its practical applications")

Art Unit: 1631

(citing O'Reilly v. Morse, 56 U.S. (15 How.) at 114-19). A claim is limited to a practical application when the method, as claimed, produces a concrete, tangible and useful result; i.e., the method recites a step or act of producing something that is concrete, tangible and useful. See AT &T, 172 F.3d at 1358, 50 USPQ2d at 1452. Likewise, a machine claim is statutory when the machine, as claimed, produces a concrete, tangible and useful result (as in State Street, 149 F.3d at 1373, 47 USPQ2d at 1601) and/or when a specific machine is being claimed (as in Alappat, 33 F.3d at 1544, 31 USPQ2d at 1557 (in banc))."

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In the independent claims (1, 8, 15) it is entirely unclear what the method of "analysis" is intended to accomplish. The steps of the method merely provide a "coupling" of certain variables, and it is unclear what that represents, or what is to be done with them. Further, what is the differing result obtained when one minimizes rather than maximizes? The claim sets forth no differing steps or results that clearly set forth this idea.

In claims 2, 8 and 16, is the following phrase "wherein the minimizing comprising maximizing" which is entirely unclear. Further, it is unclear where this limitation is to be added to the independent claims.

Claims 4, 10 and 18 are grammatically incorrect and are confusing. It is not clear how this limitation is to modify the method of the previous claims.

Art Unit: 1631

Claims 7, 15 and 21 are entirely unclear as to what is to be done on what from previous methods and how this affects those methods, and what results are obtained.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 8 and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by US 6,510,391.

The claims are drawn to methods of analysis of transcripts of probe arrays wherein the intensities of the hybridizations are coupled to levels of transcripts. The effects of cross hybridization are minimized.

Balaban (US 6,510,391) having an effective filing date of 11/22/00, discloses the same methods as the rejected claims. Balaban discusses the effects of cross hybridization at length, and how it can affect transcript hybridization intensity levels, and how to adjust. These disclosures meet the limitations of the rejected claims.
